

## AMENDMENTS TO THE SPECIFICATION

The following is a complete, marked up listing of the amended paragraphs with underlined text indicating insertions, and strikethrough and/or double-bracketed text indicating deletions.

Please amend the Specification as follows:

[0026] A small annular space 62 is formed between the jet pump diffuser tailpipe and the adapter, hampering access to the three welds. Indeed, in typical installations, the small annular space may be as narrow as 0.625 inch (about 16 mm), rendering the necessary inspection of the welds a serious challenge. As shown in FIG. 2, the ~~annular~~ annular space 62 has both a depth and a width, *i.e.*, the spacing between opposing walls formed by the jet pump diffuser 34, the lower adapter ring 60 and the upper adapter ring 58, and may be further characterized by depth to width ratio.
